

Intervalid DPMS

**The intuitive platform for your
data protection management**

Simplify data protection.
Stay GDPR compliant with confidence.

An abstract graphic consisting of several thick, bright blue geometric shapes. A large 'V' shape is formed by two long, parallel bars that meet at a point. To the left, another bar extends upwards and to the left. To the right, a third bar extends upwards and to the right. These bars are set against a dark blue background with a subtle, wavy, textured pattern. The overall effect is modern and tech-oriented.

interValid DPMS

Effective data protection starts with clear processes.

With Intervalid DPMS, you rely on a modern software solution that makes your data protection management simple, transparent and sustainable. The DPMS software supports you in systematically implementing all data protection processes, reducing risks and ensuring compliance with legal requirements.

Intervalid DPMS is ready to use right away, with no complex IT installation required. The application is operated in an ISO 27001-certified data center and therefore meets the **highest security standards**.

What sets Intervalid DPMS apart:

Ready to use quickly

The interface is clearly structured and easy to use. This helps users find their way around quickly and keeps training requirements low.

Training that fits your needs

We support your team with practical training tailored to your team's roles, processes and desired level of detail.

Proven since 2017

Intervalid has been in use since 2017 and brings experience from a wide range of industries across the DACH region and internationally. This practical expertise directly contributes to the software's ongoing development.

Direct support

You work not only with software, but with a team that is available, thinks along with you and supports you from implementation through ongoing operation.

Flexible, secure and future-ready

Intervalid DPMS is available as a SaaS solution or on-premise. Your data remains within the EU; Intervalid operates in an ISO 27001-certified environment and is itself ISO 27001 certified.

Six service areas for structured data protection management.

Interval DPMS organises all key data protection tasks into clear, easy-to-understand work areas from establishing the database through to audits, training and continuous updates.

1

Records of Processing Activities

Capture processing activities, collect information using questionnaires, import existing data and document changes transparently.

2

GDPR Compliance & Risk

Systematically map checklists, data protection impact assessments, internal audits and risk assessments.

3

Security Incidents & Data Subject Rights

Capture, process and document data protection incidents through defined workflows and handle data subject requests with ease.

4

TOMs & Follow-up Checks

Manage technical and organisational measures, keep them up to date and carry out regular reviews in a structured way.

5

Workflows & Responsibilities

Manage tasks, deadlines and responsibilities centrally from action management to annual reviews.

6

Reports, Training & Documents

Provide analyses, data protection reports, document templates, e-learning and training records centrally.

The DPMS process.

Clearly guided and digitally supported.

Intervalid turns data protection requirements into clear, actionable steps. This helps you stay on top of everything from the initial questionnaire to ongoing maintenance.

1 Preparation

Collect data systematically using questionnaires or simply import an existing record of processing activities.

2 Implementation

Set up your record of processing activities and TOMs, involve employees and assign tasks with deadlines.

3 Compliance

Use checklists, conduct data protection impact assessments, prepare audits and assess suppliers.

4 Reports

Create, approve and share reports, data protection reports and evidence quickly, internally or externally.

5 Security Incident

Document and assess incidents, inform the required parties and implement measures.

6 Data Subjects

Capture, process and complete data subject rights requests in a structured and timely manner.

7 Training

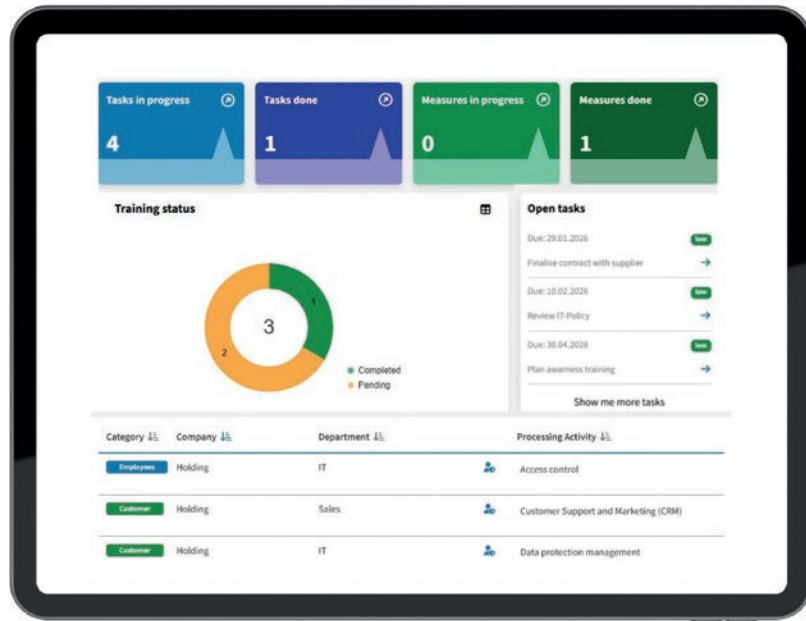

Organise training, document participation and evaluate progress.

8 Ongoing Maintenance

Keep processing activities, TOMs and contacts up to date and continuously develop your DPMS.

Work more efficiently with AI support

The integrated AI function supports data protection-related tasks, provides relevant suggestions and makes everyday work easier.

Developed for data protection processes. Built for everyday work.

Intervalid DPMS takes the pressure off data protection officers, IT teams and specialist departments simplifying updates, deadlines, evidence and coordination.

Centralised Data Management

Records of processing activities, TOMs, contacts, suppliers and documents are maintained in one place – up to date, traceable and easy to find.

Structured Workflows

Workflows for data subject rights, security incidents, tasks and audits provide guidance and reduce coordination effort.

Instant Access to Evidence

Reports, data protection reports, training statuses and analysis are quickly available for internal management, audits and information requests.

Data protection that grows with your organisation.

Intervalid DPMS grows with your organisation from a quick and easy start to managing multiple companies or tenants.

Small & Medium-Sized Businesses

Get started quickly, create clear structures and organise information security efficiently.

Corporations & Corporate Groups

Use scalable processes, multilingual capabilities and multitenancy to support more complex organisations.

Partners & Consultants

Support customers in a structured way, roll out standards efficiently and manage multiple tenants clearly.

Developed in-house

Our in-house development team continuously enhances Intervalid with practical features, direct support and regular updates. Available as SaaS or on-premise; data is stored in the EU and the solution is operated in an ISO 27001-certified environment.
