Intervalid ISMS

The central GRC platform for information security and compliance

Get started easily.
Work intuitively.
Meet requirements with confidence.

intervalid ISMS

intervalid ISMS

Information security needs to do more today.

Companies are under pressure: cyber risks are increasing, regulatory requirements are becoming more complex, and audits always require verifiable evidence. At the same time, limited time and resources often make it difficult to maintain a clear, central overview of tasks, documents, risks and responsibilities.

The solution

Intervalid ISMS brings all key information security management tasks together in one structured, digital platform – practical, efficient and audit-ready.

Why Intervalid ISMS ?

Intervalid covers the entire ISMS lifecycle, from standards and documentation to risk management and business continuity, through to audits, reporting and continuous improvement.

Ready to use quickly

Intervalid ISMS is intuitively structured and easy to use. This keeps training requirements low and helps your team to become productive quickly.

Training that fits your needs

On request, we provide individually tailored training that is practical, easy to understand and precisely aligned with your requirements.

Proven in practice since 2017

Intervalid ISMS has been on the market since 2017 and supports organisations across a wide range of industries across the DACH region and internationally. This practical experience has helped make the software user-friendly, reliable and ready for future requirements.

Personal support

With Intervalid, you get more than just software you receive personal support whenever you need it. Our team reliably supports you from implementation through ongoing operation.

Flexible, secure and future-ready

Intervalid ISMS is available as a SaaS solution and on-premise. The solution is operated in an ISO 27001-certified environment, and your data remains within the EU. Intervalid itself is also ISO 27001 certified.

One platform.
Six service areas.

Intervalid covers the entire ISMS lifecycle from standards and documentation to risk management and business continuity, all the way through to audits, reporting and continuous improvement.

1 Standards & Requirements

Manage standards and regulatory requirements centrally, including ISO 27001, NIS2, DORA, BSI IT-Grundschutz, VDA ISA, CISIS12®, B3S, ISO 22301, VdS 10100, AI Act and CRA, and many more.

2 Asset & Risk Management

Structure information assets, define protection requirements, classify assets, analyse risks and manage security incidents in a structured way.

3 Documentation & Governance

Manage policies, procedures and evidence centrally, keeping them controlled and up to date.

4 Tasks & Collaboration

Involve employees, assign responsibilities, track tasks and manage workflows efficiently.

5 Business Continuity

Plan for business continuity and emergencies with BCM processes that help your organisation keep operating in exceptional circumstances.

6 Audits & Suppliers

Plan and conduct internal and external audits in a structured way, review measures and identify weaknesses. Assess suppliers using questionnaires and identify risks at an early stage.

The entire ISMS process.
Digitally mapped.

Intervalid guides you step by step through the setup, operation and continuous development of your ISMS.

1 Preparation

Select and work with standards. Adapt policy templates to your organisation.

2 Implementation

Involve employees, assign responsibilities and ensure progress.

3 Assets

Map information in the asset register, define protection requirements and classify assets.

4 Risk Analysis

Identify threats, assess risks and define and assign measures.

5 Reports

Create, approve and share reports and information security reports.

6 Security Incident

Capture and analyse incident data and implement preventive measures.

7 KPIs

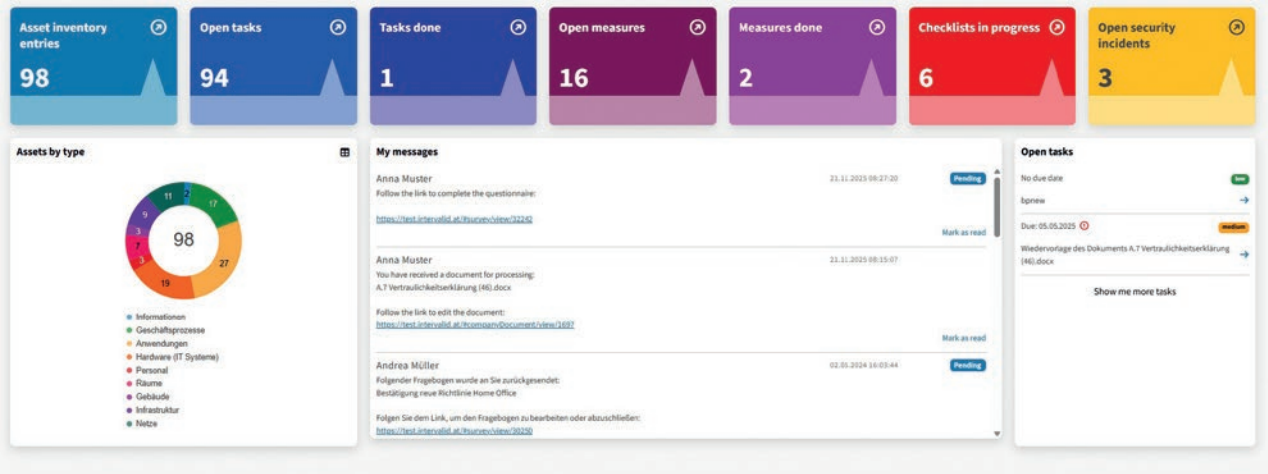

Measure the maturity level of your ISMS quickly and easily.

8 Audits & Suppliers

Plan and conduct audits in a structured way and assess suppliers.

Work more efficiently with AI support

The integrated AI function supports information security related tasks, provides relevant suggestions and makes everyday work easier.

Developed for security. Ready for audits.

Intervalid ISMS was developed for organisations that want to do more than document information security, they want to manage it effectively in their day-to-day operations. The software reflects the practical needs of IT teams, information security officers, data protection experts and consultants.

More structure

All relevant information, tasks and evidence are managed centrally instead of being scattered across Excel spreadsheets, folders and email threads.

Less effort

Templates, questionnaires, workflows and reports reduce manual effort and help you complete recurring tasks more quickly.

More security

Risks, measures and audits remain traceable at all times, giving you an up-to-date, reliable picture of your information security.

Information security starts with the right tool.

Intervalid ISMS grows with your requirements, from a compact solution for small and medium-sized businesses to multi-tenant use across corporations, corporate groups and partner networks.

Small & Medium-Sized Businesses

Get started quickly, create clear structures and organise information security efficiently.

Corporations & Corporate Groups

Use scalable processes, multilingual capabilities and multi-tenancy to support more complex organisations.

Partners & Consultants

Support customers in a structured way, roll out standards efficiently and manage multiple tenants clearly.

With Intervalid ISMS, you create a sustainable foundation for information security, compliance and successful certifications. Efficient, structured and practical.

Future-ready. Built to evolve with your requirements.

Our in-house development team continuously enhances Intervalid with practical features, direct support and regular updates. Available as SaaS or on-premise; data is stored in the EU and the solution is operated in an ISO 27001-certified environment.
